## CT – Nationality Slicer (Filter Panel)

Insights:
• The slicer displays different **Nationality** categories that users can select to filter the report data.
• It includes five nationality groups: **African, American, Asian, Australian, and European**.
• The default **selection** shows "**All**", meaning no filter is applied and the report displays data for all nationalities.
• Users can **select one or multiple nationalities** using the checkboxes to narrow down visuals based on specific demographic segments.
• This type of slicer helps in comparing metrics across regions, understanding demographic-based trends, and refining insights for targeted groups.
• Multi-select capability allows flexible filtering for cross-regional analysis (e.g., selecting **Asian + European** together).
• The clean vertical list layout makes it easy for users to quickly find and apply nationality filters.

Steps to Reproduce :

1. Insert a Slicer Visual
   • From Visualizations, select Slicer.

2. Add Data Field
   • Drag Nationality → Field of the slicer.
   • This automatically populates the list of nationality options.

3. Change Slicer Type
   • Click the slicer → in the dropdown (top right), choose:
      – List
      – Dropdown
      – Tile
4. Enable Multi-select

- Multi-select works automatically with checkboxes.
- If needed, turn ON:

Format → Selection controls → Show "Select all".

5. Format the Slicer
   - Format → Items
     – Adjust font size
     – Set text color
     – Add spacing
   - Format → Slicer header
     – Title: Nationality
     – Customize font, size, and alignment
   - Format → Background / Border
     – Add background or border for better visual clarity.

6. Use the Slicer to Filter Visuals
   - Selecting any nationality instantly updates charts, tables, and KPIs in the report.
   - "All" shows unfiltered, complete data.
